Protect your home with
ELLEMEX™ Superior roof coatings.

ELLEMEX™

You can rest easy under an ELLEMEX™ coating.

There is a great sense of well-being in knowing that the roof over your head is in good condition. A professionally restored roof beautifies your property. The cream on the cake is the knowledge that a roof in good condition adds value to your greatest asset, your home.

All of this with **Ellemex™**.

Ellemex™ is manufactured and applied exclusively by ROOF SEAL providing top quality protection to your iron or tiled roof, in a manner that eclipses all the other preparations currently available.

The basis of Ellemex's strength and durability lies in the chemistry of its unique formula.

Developed after literally thousands of hours of research and evaluation, Ellemex™ has its own unique 'secret' formula.

The result of this continual experimentation is a coating that exceeds all others in terms of strength, durability, flexibility and colour fastness.

REFLECT

Reflective coating helps beat the heat all year round.

REFLECT the remarkable coating system is so effective, when applied it can lower the temperature of a roof by as much as 12°C. This revolutionary coating may well change the way we think about insulation.

Under the blazing sun in very hot climates REFLECT comes into its own, outperforming many other forms of insulation. The internal temperatures under a roof coated with REFLECT remain cooler than under a roof insulated by other conventional means.

Another plus is that REFLECT allows any heat build up inside the building to escape and not be trapped as can occur with bulk forms of insulation.

REFLECT works with other forms of insulation helping them to perform better and of course if you are running air conditioning, its cost will be significantly reduced with the added benefit of less wear and tear on your air conditioning plant.

Also if you have solar panels on your roof, REFLECT will help keep them cooler and perform more efficiently.

There is a simple cost-effective answer!

RE-ROOFING

When only the best will do. Call today for a free measure and quote.

ROOF SEAL calls on the expertise of its licensed tradesmen, with many years of experience in the industry.

BHP steel is used with the peace of mind of their up to 36 year warranty. You will enjoy the confidence of knowing that your roof has been properly installed using the best available products. While your roof is being replaced you have the opportunity to have timbers checked both for fastening and the integrity of the timber itself. When we carry out your re-roof, we also do all the cyclonic upgrades required and everything is checked by a licensed certifier.

Steel roofing has come a long way since the old 8 foot sheets of galvanized iron. Zinc coatings are longer lasting and the steel used nowadays has superior tensile strength.

BHP Colourbond has a wide range of products for different installations and locations, along with a fashionable colour range from the traditional to modern.

If unpainted zincalume is selected because you like "the look", you will be pleased with the finished product. On inspection it may be that your roof can be restored without replacement using our special coating Ellemex™ saving you a considerable amount of money while delivering good looks and extended life.
